

PAWFECT PAWS GROOMING SYSTEM

A Mini Project Report

submitted by

VAISHNAVI K (MES24MCA-2059)

to the APJ Abdul Kalam Technological University
in partial fulfilment of the requirements for the award of the Degree
of
Master of Computer Applications

Department of Computer Applications

MES College of Engineering
Kuttippuram, Malappuram – 679582

October, 2025

Declaration

I undersigned hereby declare that the project report PAWFECT PAWS GROOMING SYSTEM submitted for partial fulfilment of the requirements for the award of degree of Master of Computer Applications of the APJ Abdul Kalam Technological University, Kerala, is a bonafide work done by me under supervision of **Ms. C M Sulaikha**, Assistant Professor, Department of Computer Applications. This submission represents my ideas in my own words and where ideas or words of others have been included, I have adequately and accurately cited and referenced the original sources. I also declare that I have adhered to ethics of academic honesty and integrity and have not misrepresented or fabricated any data or idea or fact or source in my submission. I understand that any violation of the above will be a cause for disciplinary action by the institute and/or the University and can also evoke penal action from the sources which have thus not been properly cited or from whom proper permission has not been obtained. This report has not been previously formed the basis for the award of any degree, diploma or similar title of any other University.

VAISHNAVI K(MES24MCA-2059)

9/10/2025

DEPARTMENT OF COMPUTER APPLICATIONS
MES COLLEGE OF ENGINEERING, KUTTIPPURAM

CERTIFICATE

This is to certify that the report entitled **PAWFECT PAWS GROOMING SYSTEM** is a bonafide record of the Mini Project work during the year 2025-26 carried out by **VAISHNAVI K (MES24MCA2059)** submitted to the APJ Abdul Kalam Technological University, in partial fulfilment of the requirements for the award of the Master of Computer Applications, under my guidance and supervision. This report in any form has not been submitted to any other University or Institution for any purpose.

Internal Supervisor

Head of The Department

Acknowledgment

I would like to begin by expressing my deep sense of gratitude to the Almighty, whose blessings and guidance have been a constant source of strength and inspiration throughout the completion of my project work .

I owe my sincere thanks to my project guide, Ms. C M Sulaikha, Assistant Professor, Department of Computer Applications, MES College of Engineering, Kuttippuram, for his valuable guidance, constructive suggestions, and constant encouragement at every stage of the project. His insights and expertise have been instrumental in shaping this work into its final form.

I also express my heartfelt gratitude to the Prof. Hyderali K ,Head of the Department of Computer Applications for providing me with the necessary facilities, encouragement, and academic support during the course of my project. My sincere thanks also go to all the faculty members and technical staff of the Department of Computer Applications for their timely advice, cooperation, and moral support.

I am especially thankful to my friends and classmates for their valuable feedback, collaboration, and encouragement, which motivated me to enhance the quality of this work.

Finally, I express my deepest gratitude to my family members for their unconditional love, patience, and constant support, which gave me the confidence to successfully complete this project.

VAISHNAVI K
(MES24MCA-2059)

Abstract

The Pawfect Paws Grooming System is a Django-based web application designed to streamline and modernize pet grooming services, addressing operational challenges faced by grooming businesses. The system simplifies appointment scheduling, customer management, and service enhancing the overall experience for both pet owners and administrators. By automating essential tasks and maintaining accurate records, the platform aims to ensure efficiency, transparency, and customer satisfaction in grooming operations. At its core, Pawfect Paws leverages a secure and intuitive interface that supports user authentication and role-based access control. Customers can register, log in, and manage their profiles, while administrators are granted advanced permissions to oversee all aspects of the platform. Users can easily create pet profiles, specify details such as breed and age, and browse a comprehensive service catalog. This catalog provides detailed descriptions and pricing, allowing customers to book or cancel appointments seamlessly. Key features include a customer portal that enables users to view, book appointments, service costs . The administrative module allows grooming to manage services. This structured functionality ensures smooth operation, minimizes errors, and maintains consistent services. The system emphasizes data security and privacy by implementing secure authentication protocols and safeguarding user information. By fostering a trustworthy environment, it encourages active engagement from customers and provides a reliable platform for business growth. Furthermore, the system is designed for scalability, making it adaptable to evolving business needs and increasing customer demands. The system was developed using Python 3, the Django web framework, and a SQLite database for data storage. The frontend is built using HTML, CSS, Bootstrap and JavaScript, providing a responsive and user-friendly interface. Development was carried out using PyCharm and tested on a local server environment Overall, Pawfect Paws Grooming serves as a comprehensive solution for grooming service providers, delivering a streamlined, user-friendly, and secure environment for managing pet grooming operations efficiently.

Chapter 1. Introduction

The Pawfect Paws Grooming System is a dedicated Django-based web application developed to revolutionize the management of pet grooming services. Recognizing the operational challenges inherent in traditional scheduling, customer management, and record-keeping, this platform was designed as a modern, efficient solution. The core objective is to streamline business processes, ensure transparency, and significantly enhance customer satisfaction through automation and a secure, user-friendly interface. By supporting robust features like comprehensive pet profiles, and seamless appointment booking, Pawfect Paws offers grooming service providers a reliable and scalable foundation for business growth.

1.1 Motivation

Pet service businesses are facing rising consumer expectations for seamless “book-anytime, anywhere” convenience, while outdated manual scheduling and paper records continue to cause double-bookings, errors, and lost revenue. To stay competitive and foster customer loyalty, there's a growing need for transparent pricing, instant confirmations. With increasing pressure to modernize and differentiate from traditional groomers, the opportunity lies in future-proofing operations through a scalable digital platform that supports online payments, loyalty programs, and mobile apps.

1.2 Objectives

The Pawfect Paws Grooming System aims to deliver a comprehensive web application that streamlines daily grooming operations, automates appointment scheduling for both customers and administrators, and simplifies customer profile management. It will feature intuitive tools for managing the grooming service catalog, ensure secure authentication protocols, and implement

role-based access control to distinguish between customer and admin functionalities. Built on Django with Python and a responsive frontend stack including HTML, CSS, Bootstrap, and JavaScript, the system is designed to be scalable, modern, and adaptable to future business growth and evolving digital demands.

1.3 Contributions

The Pawfect Paws Grooming System's contributions are primarily defined by its automation, integration, and digital security, which stand in sharp contrast to the fragmented, manual, and localized nature of traditional operations.

1.4 Report Organization

The project report is organized into five chapters:

- **Chapter 1:** The Pawfect Paws Grooming System, provides an introduction to the project, its motivation, objectives, contributions, and overall scope.
- **Chapter 2:** Presents a system study, discussing the existing systems, their limitations, and the proposed solution with detailed functionalities.
- **Chapter 3:** Details the methodology used for implementation, including system architecture, module descriptions, and sprint planning.//possible directions for future enhancements and improvements.
- **Chapter 4:** Discusses the results, system testing, and observations.
- **Chapter 5:** Concludes the report, summarizing the findings and outlining potential future enhancements.

Chapter 2. System Study

The report analyzes the current methods used in the pet grooming industry, identifies their inherent limitations, and details the requirements and functionalities of the proposed **Pawfect Paws Grooming System** as the modernized solution.

2.1 Existing System

- The existing system is often a combination of manual, paper-based processes and/or disconnected digital tools (like generic spreadsheets, basic calendars, or phone calls/texts).
- Manual/Paper-Based Appointment Scheduling: Appointments are booked primarily through phone calls, walk-ins, or physical appointment books/paper calendars
- Inefficiencies:
 - Human Error: High risk of double-bookings, missed appointments, and recording errors due to illegible handwriting or manual transcription.
 - Customer and pet records stored in paper files or spreadsheets
 - No centralized platform for service and data management
 - Limited access to pet grooming history and preferences
 - Minimal data security: risk of information loss or misuse.

2.2 Proposed System

- Centralized web-based platform for managing pet grooming services.
- User-friendly interface for customers and administrators.

- Secure customer registration and login with role-based access.
- Pet profile creation with photo uploads and detailed attributes.
- Service catalog browsing and appointment booking functionality.
- Automated appointment scheduling.
- Admin dashboard for managing services

2.3 Functionalities of Proposed System

- **User Authentication and Role-Based Access** A secure registration and login system for both customers and administrators, implementing role-based access control to ensure appropriate platform permissions.
- **Comprehensive Service Catalog Management** Administrators can manage and update a detailed service catalog, while customers can browse descriptions, features, and transparent pricing.
- **Pet Profile Management (Customer)** Allows customers to easily create profiles for their pets, including breed, age.
- **Appointment Booking (Customer)** Enables customers to view real-time availability and book grooming appointments 24/7 through a user-friendly interface.

Chapter 3. Methodology

The development of the Pawfect Paws Grooming System followed a structured, software engineering methodology, likely an Agile or Iterative Model, given the focus on a responsive interface and scalable design.

The project began by analyzing operational challenges faced by traditional grooming businesses. This stage defined the core needs: streamlining appointment scheduling, managing customer records, and providing a comprehensive service catalog. The process began with a thorough analysis of the operational pain points in traditional grooming businesses, identifying key requirements such as efficient appointment scheduling, robust customer record management, and a dynamic service catalog. From there, the system was built incrementally through short development cycles, allowing for continuous feedback, rapid prototyping, and timely adjustments to ensure a responsive interface and scalable architecture. This approach ensured that both customer and administrative needs were addressed effectively while keeping the platform adaptable to future enhancements.

3.1 Introduction

The Agile methodology is an iterative and incremental approach to software development. Unlike traditional models, Agile emphasizes flexibility, continuous feedback, and collaboration between developers and stakeholders. The development process is divided into sprints, where each sprint delivers a working increment of the system.

This methodology is ideally suited for the Pawfect Paws Grooming System, where evolving requirements such as appointment scheduling, pet profile customization, and real-time

notifications demand rapid responsiveness. Agile empowers developers to incorporate feedback from pet owners, groomers, and administrators throughout the development cycle, ensuring the system remains user-centric and scalable. Regular sprint reviews and testing cycles enhance software quality, reduce deployment risks, and accelerate the delivery of secure, intuitive features tailored to the grooming industry's dynamic needs

3.2 Software Tools

The development of the *Cardiovascular Risk Assessment System* required various software tools, programming languages, and frameworks. The selected tools were chosen based on their suitability, ease of integration, community support, and effectiveness in solving the problem. The following table lists the tools and technologies used:

Table 3.1: List the software tools or languages used for the project development

Operating System	Windows 10/11
Front End	HTML, CSS, JavaScript,Bootstrap
Back End	Python,
Database	SQLite
Framework	Django
IDE	Visual Studio Code
Version Control	Git

Operating System: Windows 10/11

Windows was selected as the operating system since it is widely used in academic and development environments. It provides compatibility with essential tools such as Python, Django, and Visual Studio Code. The ease of installation and support for third-party libraries also made it a reliable choice for this project.

Back End: Python

For the Pawfect Paws Grooming System, Python was chosen as the backend programming language due to its clarity, simplicity, and powerful ecosystem that aligns perfectly with the

project's goals. Its seamless integration with Django enabled rapid development of a secure and scalable web application tailored for pet grooming services.

Framework: Django

Django is a powerful web framework that handles the core backend responsibilities of the Pawfect Paws Grooming System. It manages user requests, connects the frontend with backend logic, and ensures secure data flow throughout the application. Django simplifies tasks like routing URLs, rendering templates, processing forms, and managing user authentication. It also provides built-in tools for session handling, access control, and integrating custom business logic, making it an ideal choice for building a secure, scalable, and maintainable grooming service platform.

Database(SQLite)

SQLite was selected as the database for this project because it is lightweight, serverless, and easy to integrate with Python applications. As an embedded database, SQLite requires minimal configuration and can be bundled directly with the application, making it ideal for small to medium-sized projects and academic solutions.

Version Control: Git

Git was used for version control to track changes in the codebase. It enabled easier collaboration and ensured that progress could be managed effectively with rollback options in case of errors.

3.3 Module Description

A software module is a self-contained unit within a system that performs a specific function and contributes to the overall functionality of the application. Dividing a project into modules improves clarity, simplifies development, and makes maintenance easier by isolating different responsibilities. In the Pawfect Paws Grooming System, the architecture is organized into two main modules: the Admin Module and the Customer Module. Each module is designed to handle specific tasks the Admin Module focuses on managing services, appointments, pricing, and customer records, while the Customer Module handles service, appointment booking, pet profile management.. This modular approach ensures better scalability, secure access, and

efficient collaboration during development .The Pawfect Paws Grooming System is divided into the following modules:

1. **Admin Module**
2. **Customer Module**

3.3.1 Admin Module

The Admin Module allows administrators to manage the grooming platform efficiently. Key functionalities include:

- Admin Registration/Login: Secure authentication for accessing the admin dashboard.
- Service Management: Add, update, or remove grooming services and pricing details.
- Media Upload: Upload images and videos to showcase services in the catalog.
- System Monitoring: Track platform activity and maintain service transparency.

3.3.2 Customer Module

The Customer Module is designed for pet owners to interact with the grooming system. Its main features include:

- Customer Registration/Login: Secure user authentication for accessing the platform.
- Pet Profile Management: Add and manage pet details including breed, age, and grooming preferences.
- Service Browsing: Explore available grooming services with descriptions and media.
- Appointment Booking: Schedule grooming appointments and payment.

3.4 User Story

Table 3.2: User Story

User Story ID	As a type of User	I want to	So that i can
1	USER	Register	Create an account to access personalized services and manage pet profile
		Login	Securely access my personalized dashboard
		Book an Appointment	Schedule grooming services for my pet at a convenient time
		View Appointment Status	Track upcoming bookings and receive confirmations or update
2	ADMIN	Register	Allow authorized personnel to manage the platform
		Login	Securely access the admin dashboard with username and password
		Create and Manage services	Add, edit, and delete grooming services

Database Design

Collection	Attributes	Purpose
CustomUser	- Email(PK) - Name - is_active - is_staff - date_joined	Stores details of registered users and admins for authentication and authorization.
Registration	- Name - Email - Password	Legacy table for storing basic registration info (name, email, password); used as fallback or transitional data.
Service	- servicename - description - image - price	Holds grooming service details including name, description, image, and price; used for display and booking.

Collection	Attributes	Purpose
Booking	• User(FK) • Service(FK) • Pet Name • Pet type • Breed • Gender • Age • Date • Time slot • Status • created_at	Captures appointment details including pet info, selected service, date, time slot, and status; links user to service. .

Table 3.6: Database Design

Chapter 4. Results and Discussions

The Pawfect Paws Grooming System successfully fulfills its objective of streamlining pet grooming operations through a secure, responsive, and user-friendly web application. Developed using Django and deployed in a local server environment, the system automates key business processes for both pet owners and administrators.

- User Management: Role-based access control ensures secure authentication for pet owners and admins.
- Pet Profile Handling: Owners can create detailed pet profiles with species, breed and age.
- Service Catalog: A dynamic catalog displays grooming services with descriptions, pricing, and duration. Appointment Scheduling: Users can book grooming sessions with real-time availability and confirmation.
- Payment Integration: Razorpay integration enables secure online transactions during checkout.
- Admin Control Panel: Administrators can manage services efficiently.

Figure 4.1: Landing Page

Figure 4.1 this the form pageFigure 4.2: Service Selection Page

Figure 4.2 Users can browse available grooming services, view detailed descriptions, and select services based on their pet’s needs. Each service card includes price and estimated time, helping users make informed choices.

Figure 4.3: Appointment Booking Form& Razorpay Payment Interface

The screenshot displays a web form titled "Add Pet Details". The form contains the following fields and options:

- Owner Name:** A text input field containing "abc".
- What type of pet?:** Two radio button options: "Cat" (selected) and "Dog".
- Name of your pet?:** A text input field containing "bruno".
- Breed of your pet?:** A text input field containing "Labrador Retriever".
- Gender of your pet?:** Two radio button options: "Female" and "Male".
- How old is your pet?:** Three radio button options: "<3 Months", "<11 Years", and "11+ Years".
- Service Selected:** A text input field containing "Nail Trimming".
- Select Booking Date:** A date input field showing "08-10-2025" with a calendar icon.
- Total Price:** A text input field showing "699.00".
- Buttons:** An orange "Pay" button and a purple "Back to Home" button with a house icon.

Figure 4.3 Pet owners choose a pet profile, select a grooming service, and book an appointment by picking a date and time. The system checks availability and confirms the booking with a notification. After selecting services, users are redirected to Razorpay's secure checkout. Upon successful payment, the system stores transaction details and confirms the appointment.

Chapter 5. Conclusion

The Pawfect Paws Grooming System successfully achieves its goal of modernizing and streamlining pet grooming operations through a secure, responsive, and user-friendly web application. By automating key tasks such as appointment scheduling, service cataloging, customer management, and payment processing, the system reduces manual workload and enhances operational efficiency for grooming service providers.

The use of Django as the backend framework, combined with a clean frontend built using HTML, CSS, Bootstrap, and JavaScript, ensures a smooth experience for both pet owners and administrators. Features like role-based access control, Razorpay integration to a professional and scalable solution.

Thorough testing and structured documentation validate the system's reliability and readiness for real-world deployment. Overall, the project demonstrates a successful implementation of a full-stack web application tailored to the needs of the pet grooming industry.
